

At the conclusion of the **Radiation Oncology** program, the learner will be able to:

- Review radiation-based approaches to brain metastases and discuss toxicities associated with the treatment of brain metastases
- Understand the rationale for combining radiotherapy and immunotherapy in head and neck cancer
- Review indications for SBRT for early stage lung cancer and ongoing studies combining SBRT and immunotherapy
- Review recently published clinical trials regarding the role of radiation therapy in breast cancer with regard to whole vs. partial breast irradiation, regional nodal irradiation, and dose/fractionation
