

Radiation Oncology Program Objectives

At the conclusion of the **Radiation Oncology** program, participants will be able to:

- Describe the OARs and techniques for delivering SBRT to pancreatic and liver tumors
- Understand the evidence for and toxicity profile of prostate SBRT
- Discuss the role of ADT and SBRT in the setting of oligometastatic prostate cancer
- In-depth review of contouring and brachytherapy for gynecologic malignancies
- Learn about the long-term effects of cancer therapies on survivors and strategies to improve outcomes
- Explore the evolving role of radiotherapy and immunotherapy in the management of Hodgkin and Non-Hodgkin lymphoma
- Focus on radiation treatment planning for Hodgkin and Non-Hodgkin lymphoma
- Review indications, complication, and relevant literature for IR tumor ablation
